

Co-Design MCP Installation

Prerequisites

1. [Install or update VS-Code and GitHub Copilot](#) (requires VS-Code version 1.105.0 or newer)
 - a. In the link above, go to "Set It Up"
 - b. Then go to "GitHub Copilot Installation and connection"
 - c. Select your required environment and follow the installation process.
2. **Sign in** to GitHub
3. Make sure you have **access** to [projects or tools & methodologies](#) in Co-Design Chat.
4. **Download** the following VSIX file: <https://goto.intel.com/codesignextension>. After download was completed" The file will be downloaded you your 'Downloads' folder. Go in this page to: "Co-Design MCP Installation (via extension) - One-time setup".
5. **Alternate Method** – You can download and install the CoDesign extension via the Private Intel PESG VS Code Marketplace, instead of downloading the VSIX file manually.
 - a. Follow the setup instructions here to add the private market place into your VS code: <https://wiki.ith.intel.com/spaces/MalinaCloud/pages/4602365616/VSCode+Private+Marketplace>
 - b. Once configured, open **Extensions** in VS Code.
 - c. Search for **CoDesign** and install it directly from the marketplace.

 Handling "File Can't Be Downloaded Securely"

1. **Chrome/Edge Bypass:** When the download is blocked, check your browser download manager, click the three dots, and select "Keep dangerous file" or "Keep anyway".
2. **Windows Defender/Security:** If Windows blocks it, go to Windows Security > Virus & Threat Protection > Protection History. Locate the blocked file and select "Allow on device".

Version releases

Version Number	Date	Release notes/Key improvements
v1.0.3	16 June 2026	Proxy configuration notification
v1.0.2	26 May 2026	ValPlan AI MCP tools and skills
v1.0.1	May 2026	Coverage Analysis skill
v0.3.0	April 2026	Authentication process improvement
v0.2.1	February 2026	Kick-off, first version

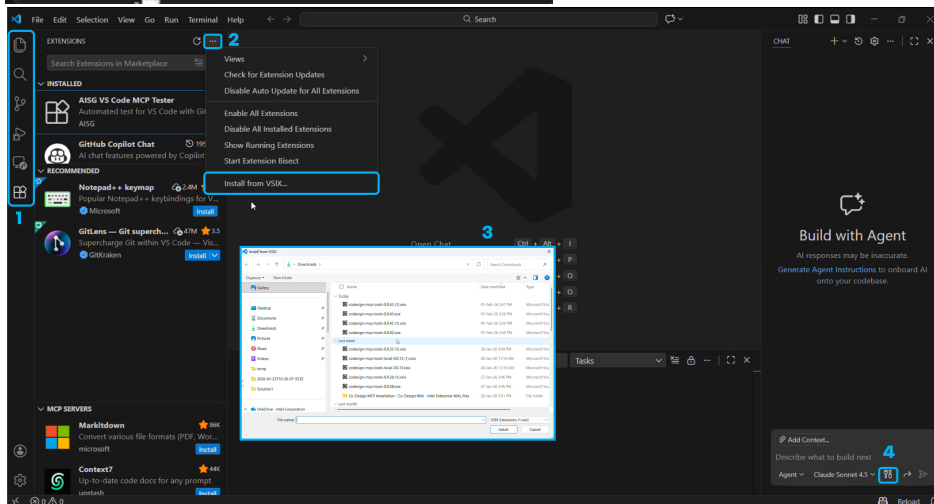

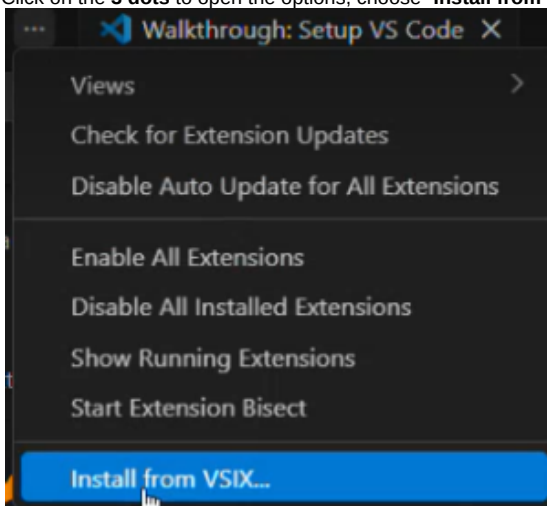

Co-Design MCP Installation (via extension) - One-time setup

Follow the instructions below or [watch our demo](#).

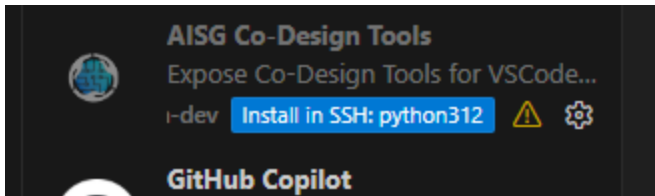

1. Open VSCode and click on the **Extensions** tab in the left panel.

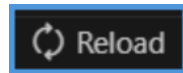

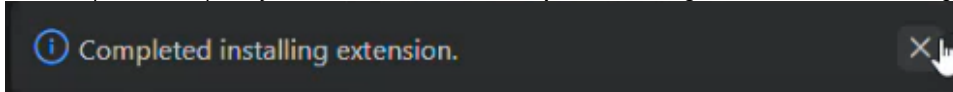

2. Click on the **3 dots** to open the options, choose “**Install from VSIX**”.

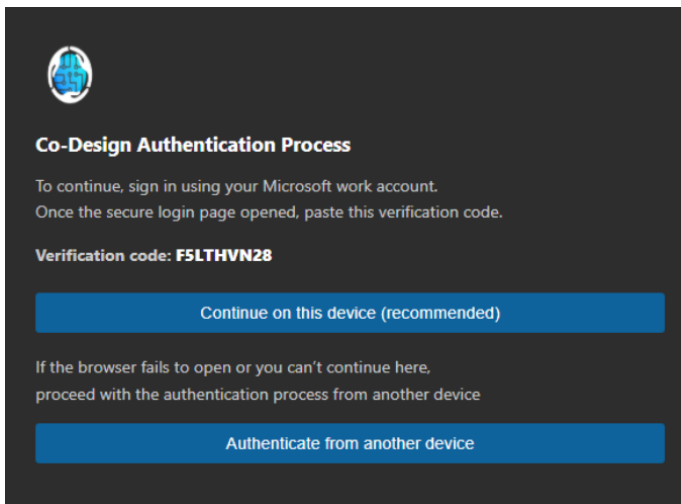

3. Upload your saved **VSIX** file to VS Code.
Note: If you are working via SSH, make sure to install it locally first, then install it in the SSH environment as well:

After the upload is complete, you will see a notification: "**Completed installing extension**" in the bottom-right corner. You can close it:

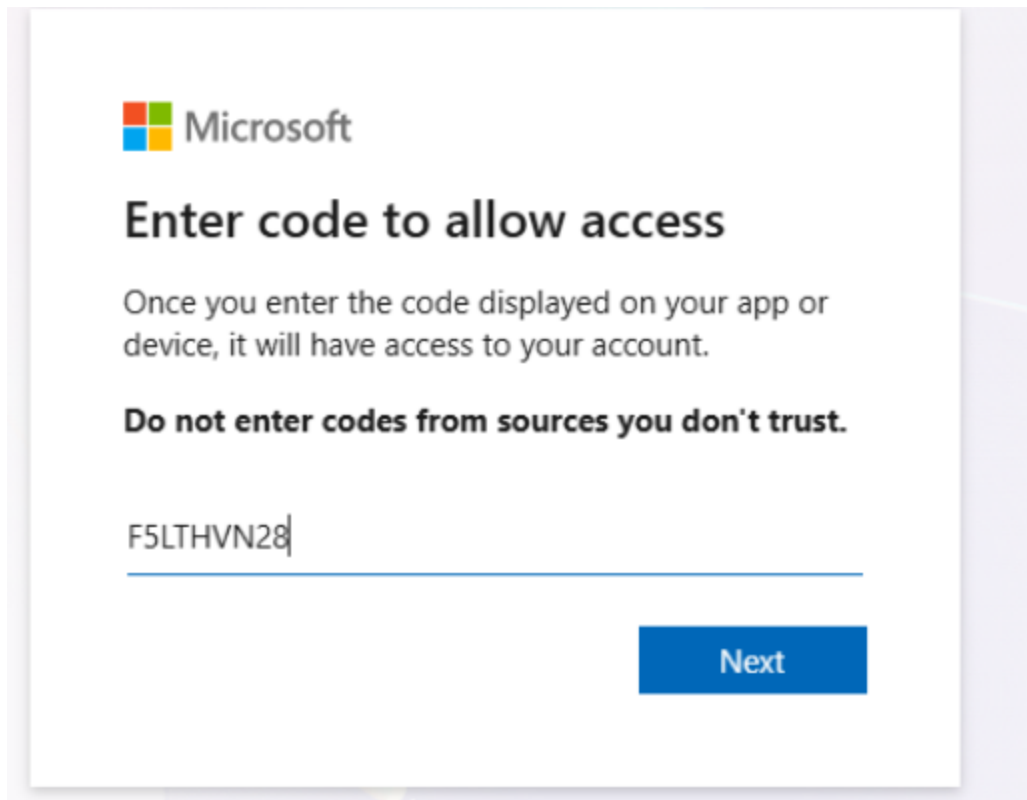

4. Reload VS Code (bottom right side).
5. An authentication tab will open on VS Code. If the authentication process doesn't start automatically or was closed unexpectedly, click on 'reload' or restart VS Code.
6. Follow the on-screen instructions

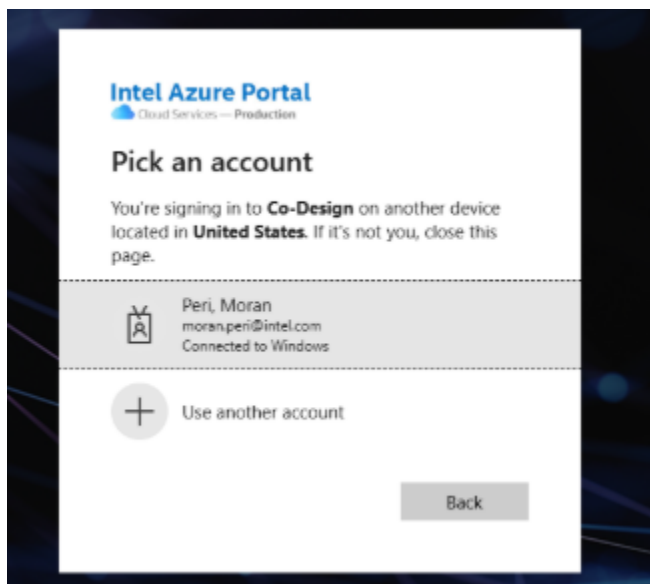

7. **Option I: 'Continue on this device':**

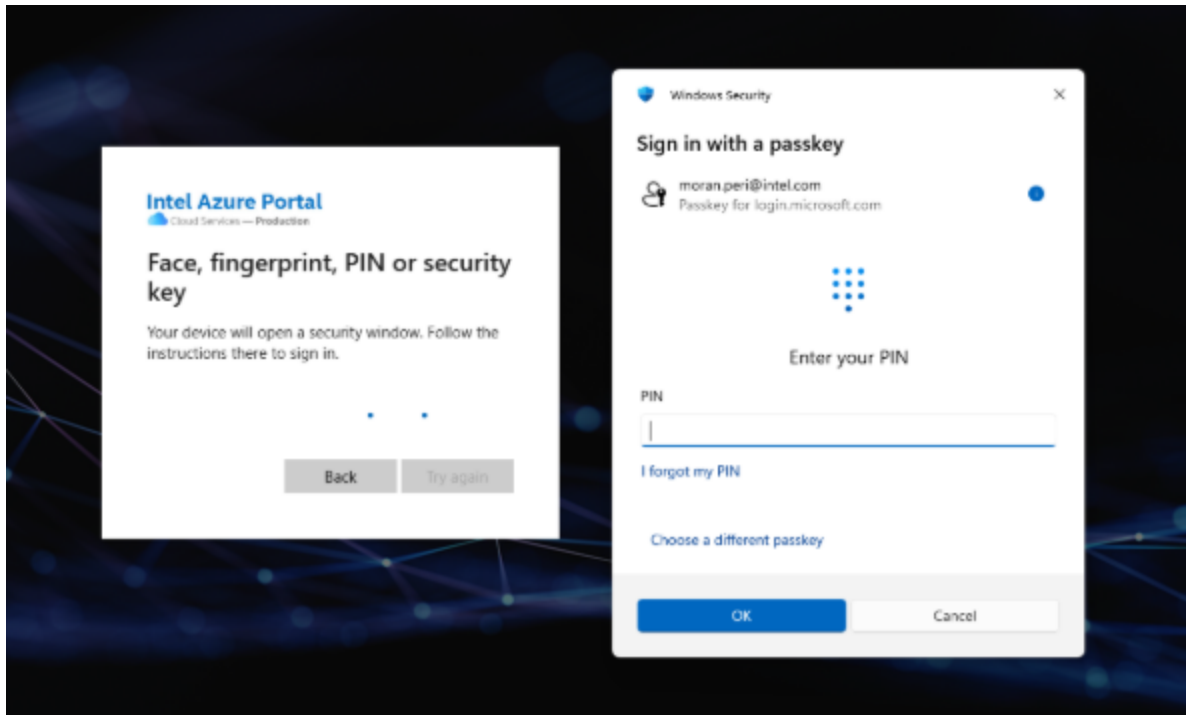

- a. Click on 'Continue on this device'
- b. The web browser will be opened
- c. Paste the code and then click 'Next' (the verification code is automatically copied into your clipboard)

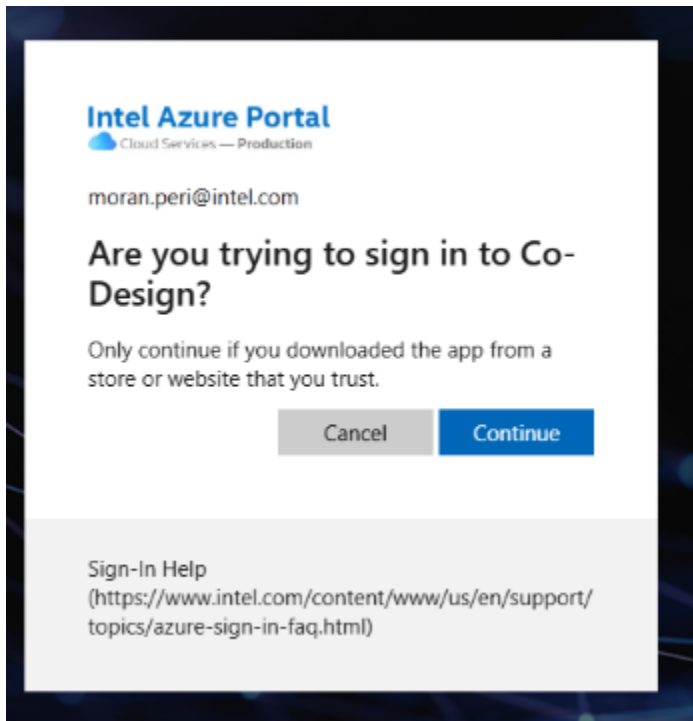

d. Pick your account

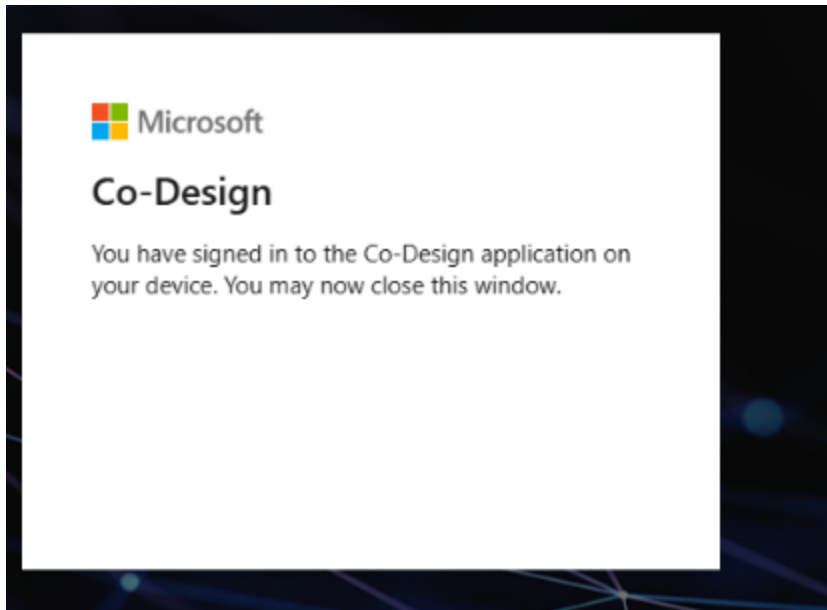

e. Provide your PIN, or select an alternative identification method

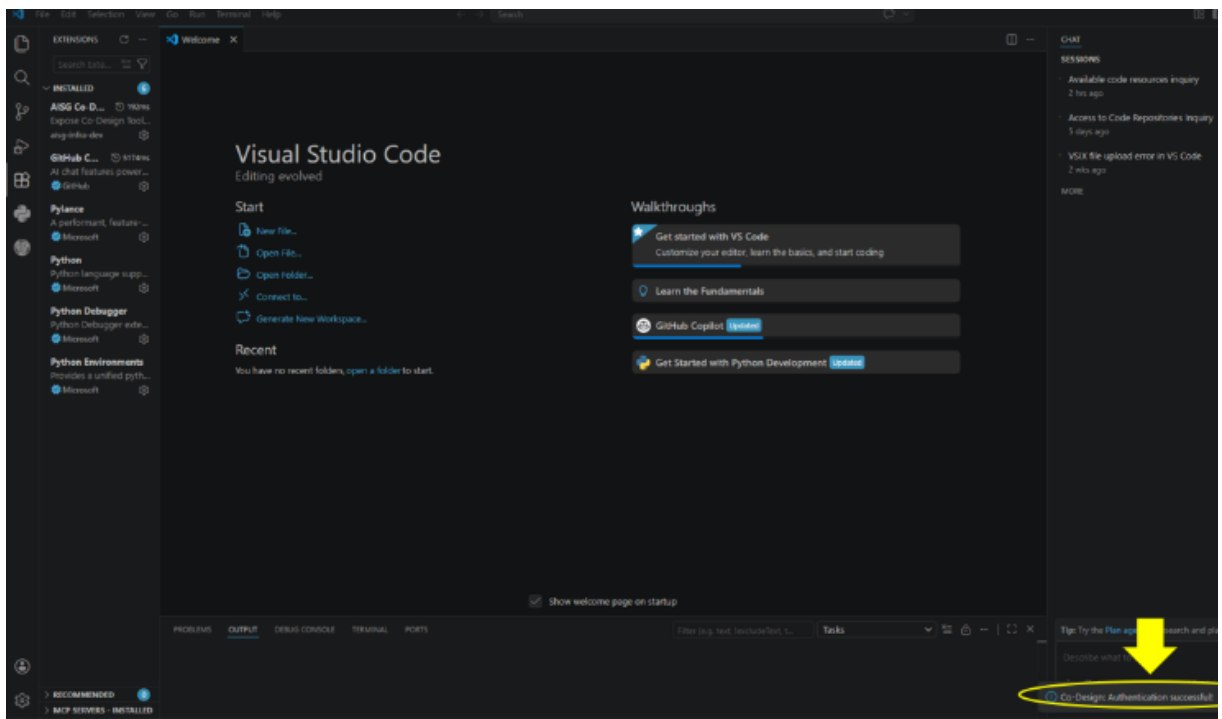

f. Click on 'Continue'

g. The authentication process is completed. You may go back to VSCode

h. You will also see a notification appear in VSCode.

i. skip to step #9

8. **Option II:** If, for any reason, you are unable to follow step 7, click on 'Authenticate on New Device' and follow the instructions on-screen. You may use any machine (even your cell phone).

Co-Design Authentication Required

Open the login page on another device or scan the QR code to proceed.

Step 1:

Open or scan the login page from another device:

<https://login.microsoft.com/device>

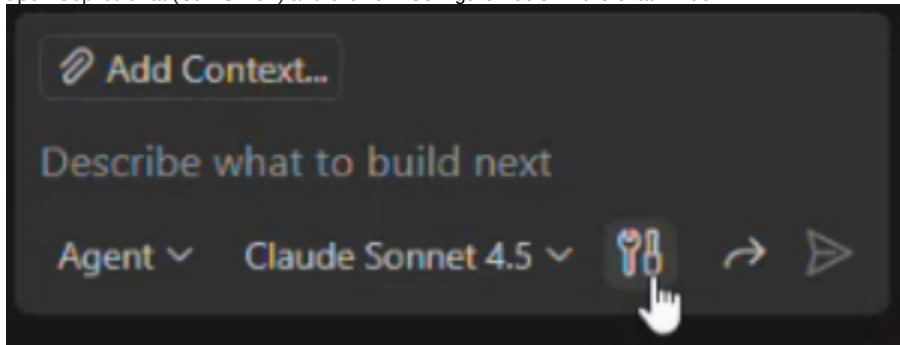

Step 2:

Enter this verification code:

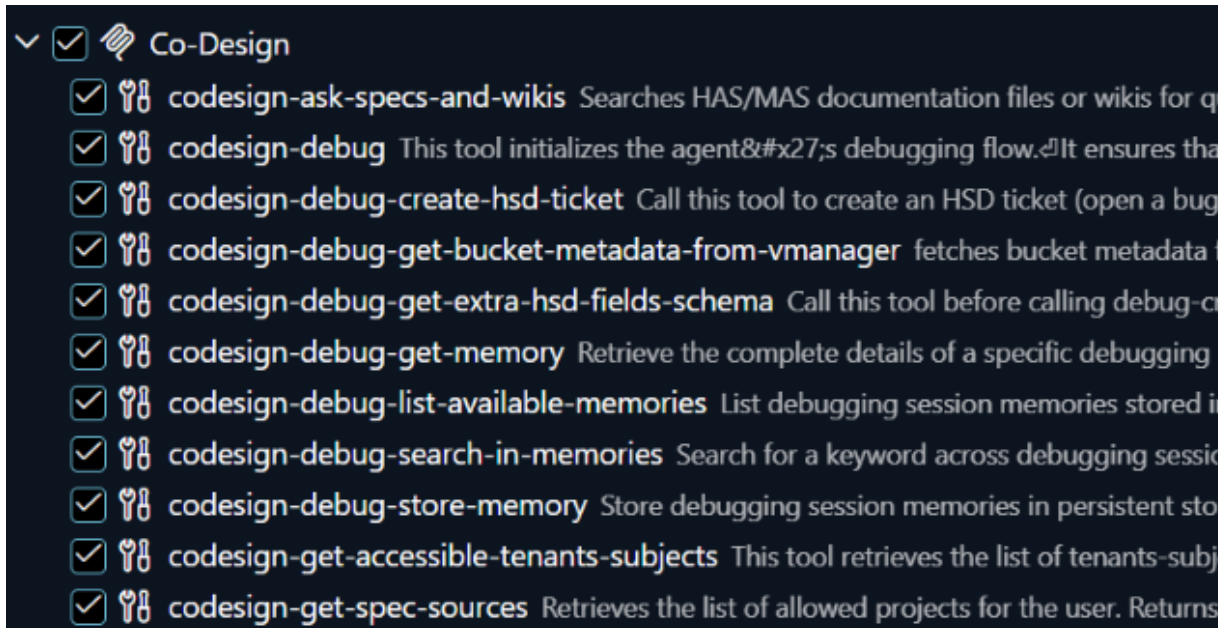

E2JAE2EFT

Follow steps **c** to **h** as detailed in Step 7.

- a. Open Copilot Chat (Ctrl+Shift+i) and click on "Configure Tools" in the chat window:

- b. Verify you are set on "agent" mode and the model is set to "Claude sonnet 4.6" (current recommendation).
c. Then, confirm that you have Co-Design MCP tools under Co-Design.

10. You are all set. Check out the different tools pages to learn more about the tools, BKMs, and how to get the most out of them.

Reload VSCode

If you encounter any issues, please reload VSCode before taking further action:

Steps to Reload VSCode:

1. Open the Command Palette: Ctrl+Shift+P (Windows) or Cmd+Shift+P (Mac)(leave the ">" that appears)
2. Type: Developer: Reload Window
3. Press Enter

Still encounter issues?

If you encounter any issues, please try our [troubleshooting](#) page.

Note

When you open a new VS Code window or on another machine, you will need to update the tools. Click on "configure tools", then, under "Co-Design," click on "Update Tools".
